

## **“Correcting” Quartus 15.0 Display Issue**

If you have a high resolution display, you may have problems with text getting **cut-off/clipped**. The following “solution” can be used to temporarily “correct” the issue.

- 1) Change the display resolution of the device to 1366x768.
- 2) Restart the device (at 1366x768).
- 3) After restarting with the lower resolution, run Quartus.

Then do either of the below.

- 4) Use Quartus normally at the lower resolution.

### **OR**

- 4) Change the resolution back to the device's native resolution, then continue working in Quartus as normal.

When done working in Quartus, do the following.

- 5) Change the resolution back to the devices native resolution (if not already done so).
- 6) Restart the device (at the native resolution).

This process will need to be done every time you needs to run Quartus.
